ARRK

Comprehensive development service from a single source

Elektronics & Software: Engineering. Digital. Driven

The mobility of tomorrow: intelligent and electric

Mobility is undergoing a revolution. Electric mobility and digitization are two major trends that are turning the automobile industry on its head.

Innovation and value creation are increasingly defined less by combustion engines and mechanics, and more strongly by software and electronics.

Driver assistance systems, new display and operating concepts, and electrical drives are now indispensable on our roads. The future lies in autonomous driving and in the growing connectivity between vehicles and their environment.

Pioneers for a digital future

We provide you with comprehensive support in all disciplines relating to electronics, software and electrical systems development – from concept development, predevelopment and series development, to safeguarding, integration and series production of your components.

As specialists in autonomous driving & driver assistance systems, cockpit electronics, HMI & displays, software & hardware development as well as electric mobility we are the best development partner of your choice on your way to digitization and electrification.

Thanks to our many years of expertise in various premium OEMs, we are among the most important partners in the automobile industry where these areas are concerned.
We help your projects thrive!

YOUR ADDED VALUE

- *Autonomous driving & driver assistance systems*
- *Cockpit electronics, HMI & displays*
- *Software & hardware development*
- *Electric mobility*
