EXPERTENMAGAZIN FÜR DIGITALE TRANSFORMATION

MEDIA KIT 2027

SPECIAL ISSUE

SECURITY

WIN
VERLAG

WIN-Verlag GmbH & Co. KG

INITIAL SITUATION

The advancing digitalisation offers the great opportunities for the economy, but with it demands on the security of data and systems. Massive breaches in the cybersecurity have become almost commonplace and regularly dominate the headlines.

No wonder, because despite the increasing threat, many companies are not even close to realising how innovative blackmailers, spies and saboteurs are today. And the dangers inside companies often lurk in secret. Managers are also often unsure how to deal with cyber risks in an increasingly complex digital world

Anyone who wants to drive forward the digital transformation of their company would do well not to view the business objectives of their IT security projects - from increasing efficiency to reducing maintenance costs - in isolation, but to approach them in an overarching and strategic manner. A current keyword of the experts in this regard is "cyber resilience": anyone who wants to network their capital goods must take precautions to ensure that they withstand attacks or are quickly available again after an attack. This is because the protection of IT systems against failure and the necessary resilience of IT systems are fundamental for business continuity.

PRODUCT CONCEPT

The Special issue "IT Security" takes up the current state of technology, management requirements, planning, measures and controls that serve to protect IT in companies.

In addition to the basics of information security the reader gets an overview of the necessary and possible of their systems with which information is processed, used and stored.

On the one hand, this includes the end devices that users use, such as PCs, notebooks, tablets and smartphones. But also the operating systems and applications that run on the devices must be protected via operating system and application security. Since most end devices are some form - often beyond the company's internal network, the Special issue provides decision-makers in the field of IT security the latest developments in the areas of Internet security, cloud security and vulnerability management.

Structure of the Special issue IT Security:

- Current products and solutions for IT Security
- Requirements for physical IT security
- How to create cyber-resilience for your company
- Insurance for IT security:
Covering cyber risks sensibly
- Employees as a weak point -
training for a security culture

SPECIAL ISSUE IT SECURITY MEDIKIT 2027

Anyone who deals with IT security - whether for production, industry or online trade will not be able to avoid this Special Issue. Here editorial knowledge from DIGITAL BUSINESS.
